SCENARIO · 1/3

Case 1 · A fever after surgery

Day 4 after a hip replacement

New fever 38.6 °C, wound is red and warm

Drain output looks cloudy

QUESTION · 2/3

What would you check first?

A. Repeat the temperature tomorrow

B. Look at the wound and take a sample

C. Change the dressing only

ANSWER · 3/3

Discussion

Answer: B

Examine the wound and send a sample before changing antibiotics.

Record the date: it decides whether this counts as a surgical site infection.

SCENARIO · 1/3

Case 2 · A cluster on one ward

Three patients with the same organism in 10 days

All in rooms 4 to 7

Shared equipment: one bladder scanner

QUESTION · 2/3

Is this an outbreak signal?

A. No, three cases are too few

B. Yes, investigate now

C. Wait for a fourth case

ANSWER · 3/3

Discussion

Answer: B

Same organism, same place, same time: start a line list today.

Check the shared equipment and its cleaning log.

SCENARIO · 1/3

Case 3 · Hand hygiene audit

Ward audit: 120 opportunities observed

78 performed correctly

Most misses: before touching the patient

QUESTION · 2/3

What is the compliance rate?

A. 54%

B. 65%

C. 78%

ANSWER · 3/3

Discussion

Answer: B · 78 / 120 = 65%

Feed back the result to the team within a week.

Focus training on moment 1: before patient contact.
